		27 June 2002 (2002-06-27)	
	D	5: DE 35 06 393 A (WINDMOELLER & HOELSCHER)	
		28 August 1986 (1986-08-28)	
	2. D:	1, which is considered to represent the prior art	
		losest to the subject matter of claim 1,	
		iscloses a generic bottoming device for hexagonal	
		ottom valve sacks as per the preamble of claim 1.	
	Σ.	occom varve sacks as per the preamble of Claim 1.	
	2.1 Tl	he subject matter of claim 1 differs therefrom by	
		ts characterizing part: that is, essentially by	
		ne presence of a gluing station with glue outlets	
	wl	nich can be supplied selectively via valves,	

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

wherein the glue supply comprises a tube reaching through an application head.

Therefore, the subject matter of claim 1 is novel (PCT Article 33(2)).

- 2.2 The problem addressed by the present invention may therefore be considered that of providing a bottoming device that enables glue to be applied more simply and with improved conformity to a preset format.
- 2.3 The solution to this problem proposed in claim 1 of the present application involves an inventive step (PCT Article 33(3)). The reasons are:

Glue outlets which can be selectively supplied with glue (cf. D2, figure 3, reference sign 38, and column 4, lines 10-11), whereby the gluing format can be defined (cf. D2, column 6, lines 34-42), and which are associated with at least one application head (cf. figure 3, reference sign 26) are known from D2; the application head is provided with valves which can selectively open and close the connection between glue outlets and a glue supply (cf. D2, figure 3, reference signs 22, 38 and 42), wherein the glue supply comprises glue feed lines and a chamber through which the valves are supplied (cf. figures 1 and 3, reference signs 16 and 42, and column 2, lines 37-39).

International application No.
PCT/EP2004/007489

	101/212001/00/109
Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	However, a glue supply with a tube reaching
	through the application head is neither known from
	nor suggested by any of the citations (D1-D5).
3	Claims 2-17 are dependent on claim 1 and therefore
	likewise meet the PCT requirements for novelty and
	inventive step.
